

# CERTIFICATE

# on Product Conformity (QAL1)

#### Number of Certificate: 0000035010

Certified AMS:	ENDA-5000 with analysing module CMA-5800 for NO <sub>x</sub> , SO <sub>2</sub> , CO, CO <sub>2</sub> and O <sub>2</sub>
Manufacturer:	Horiba GmbH Kaplanstr. 5 3430 Tulln Austria
Test Institute:	TÜV Rheinland Energie und Umwelt GmbH

# This is to certify that the AMS has been tested and found to comply with:

EN 15267-1: 2009, EN 15267-2: 2009, EN 15267-3: 2008 and EN 14181: 2004

Certification is awarded in respect of the conditions stated in this certificate (see also the following pages).

• EN 15267-3 tested

- QAL1 certified
- TUV approved
- Annual inspection

Publication in the German Federal Gazette (BAnz.) of 02 March 2012

Umweltbundesamt Dessau, 16 March 2012

i. A. Dr. Hans-Joachim Hummel

TÜV Rheinland Energie und Umwelt GmbH Köln, 15 March 2012

Pat W.Sm

ppa. Dr. Peter Wilbring

TÜV Rheinland Energie und Umwelt GmbH Am Grauen Stein 51105 Köln

Accreditation according to EN ISO/IEC 17025 and certified according to ISO 9001:2008.

Test report:
First certification:
Validity ends:
Publication:

936/21212266/A of 18 October 2011 02 March 2012 01 March 2017 BAnz. 02 March 2012, No. 36, p. 920, chapter I, No. 4.5

#### Approved application

The tested AMS is suitable for use at combustion plants according to EC directive 2001-80-EC, at waste incineration plants according to EC directive 2000-76-EC and other plants requiring official approval. The tested ranges have been chosen with respect to the wide application range of the AMS.

The suitability of the AMS for this application was assessed on the basis of a laboratory test and a five months field test at a municipal waste incinerator.

The AMS is approved for an ambient temperature range of +5 °C to +40 °C.

Any potential user should ensure, in consultation with the manufacturer, that this AMS is suitable for the installation at which it will be installed.

#### Basis of the certification

This certification is based on:

- test report 936/21212266/A dated 18 October 2011 of TÜV Rheinland Energie und Umwelt GmbH
- suitability announced by the German Environmental Agency (UBA) as the relevant body
- the ongoing surveillance of the product and the manufacturing process
- publication in the German Federal Gazette (BAnz. 02 March 2012, No. 36, p. 920, chapter I, No. 4.5, announcement by UBA from 23 February 2012)

#### AMS name:

ENDA-5000 with analysing module CMA-5800 for NO<sub>x</sub>, SO<sub>2</sub>, CO, CO<sub>2</sub> and O<sub>2</sub>

#### Manufacturer:

Horiba GmbH, Tulln, Austria

#### Field of application:

For measurements at plants requiring official approval (i. e. plants in 2000-76-EC, waste incineration directive and 2001-80-EC large combustion plants directive)

#### Measuring ranges during the suitability test:

Component	Certification range	supplementary measurement ranges	Unit
NO <sub>x</sub>	0 – 153 <sup>1)</sup>	0 - 1530 <sup>2)</sup>	mg/m³
SO <sub>2</sub>	0 - 75	0 - 750	mg/m³
СО	0 - 50	0 - 500	mg/m³
CO <sub>2</sub>	0 - 20	0 - 25	Vol%
O <sub>2</sub>	0 - 25	0 - 10	Vol%

<sup>1)</sup> as NO<sub>2</sub>, this corresponds to app.  $0 - 100 \text{ mg/m}^3 \text{ NO}^2$  as NO<sub>2</sub>, this corresponds to app.  $0 - 1000 \text{ mg/m}^3 \text{ NO}^2$ 

#### Software version:

P10008770011

#### **Restrictions:**

None

#### Note:

A four weeks period has been specified as maintenance interval with a reservoir size of 40 I for the phosphoric acid.

#### Test report:

TÜV Rheinland Energie und Umwelt GmbH, Köln Report No.: 936/21212266/A dated 18 October 2011

#### **Certified product**

This certificate applies to automated measurement systems confirming to the following description:

The measuring system is a multicomponent gas analyser for the measurement of emissions. The analyser of the type series ENDA-5000 is a measuring device to observe continuously the concentration of  $NO_x$ ,  $SO_2$ , CO,  $CO_2$  and  $O_2$  at stationary emission sources. It measures simultaneously the five above listed gas components. The system measures the concentration of the components  $NO_x$ ,  $SO_2$ , CO,  $CO_2$  and  $O_2$  in dry conditions because the moisture from the measuring gas is removed with help of sample gas chillers. For the measuring channels  $NO_x$ ,  $SO_2$ , CO and  $CO_2$  the non-dispersive infrared ray absorptiometry with cross modulation system (NDIR) is used.

For the determination of the oxygen concentration a magneto-pneumatic system (MPA) is applied, which is free from cylinder gas as a carrier gas.

For the minimisation of the  $SO_2$  losses in the sample conditioning system a 10 percent phosphoric acid is added upstream of the sample gas chiller into the hot sample gas.

#### **General notes**

This certificate is based upon the equipment tested. The manufacturer is responsible for ensuring that on-going production complies with the requirements of the EN 15267. The manufacturer is required to maintain an approved quality management system controlling the manufacture of the certified product. Both the product and the quality management systems shall be subject to regular surveillance.

If a product of the current production does not conform to the certified product, TÜV Rheinland Energie und Umwelt GmbH must be notified at the address given on page 1.

A certification mark with an ID-Number that is specific to the certified product is presented on page 1 of this certificate. This can be applied to the product or used in publicity material for the certified product.

This document as well as the certification mark remains property of TÜV Rheinland Energie und Umwelt GmbH. With revocation of the publication the certificate looses its validity. After the expiration of the validity of the certificate and on requests of the TÜV Rheinland Energie und Umwelt GmbH this document shall be returned and the certificate mark must not be employed anymore.

The relevant version of this certificate and the validity is also accessible on the internet Address: **qal1.de**.

Certification of ENDA-5000 with analysing module CMA-5800 for  $NO_x$ ,  $SO_2$ , CO,  $CO_2$  and  $O_2$  is based on the documents listed below and the regular, continuous monitoring of the Quality Management System of the manufacturer:
