

CERTIFICATE

of Product Conformity (QAL1)

Certificate No.: 0000027277 05

Certified AMS:	APDA-371 with $PM_{2.5}$ pre-separator for suspended particulate matter $PM_{2,5}$
Manufacturer:	HORIBA Europe GmbH Hans-Mess-Str. 6 61440 Oberursel /Ts. Germany
Test Institute:	TÜV Rheinland Energy & Environment GmbH
	This is to certify that the AMS has been tested

and found to comply with the standards VDI 4202-3 (2019), EN 16450 (2017), EN 14907 (2005), Guide for Demonstration of Equivalence of Ambient Air Monitoring Methods (2010) as well as EN 15267-1 (2009) and EN 15267-2 (2023).

Certification is awarded in respect of the conditions stated in this certificate (this certificate contains 11 pages).

The present certificate replaces certificate 0000027277 04 dated 4 June 2020.

Publication in the German Federal Gazette (BAnz) of 23 July 2013

Test report: Initial certification: Expiry date:

Certificate:

Publication:

Approved application

The tested AMS is suitable for continuous immission measurement of PM_{2.5} in stationary use.

The suitability of the AMS for this application was assessed on the basis of a laboratory test and a field test at four different locations.

The AMS is approved for an ambient temperature range of +5 °C to 40 °C.

28 July 2010

23 March 2030

The notification of suitability of the AMS, performance testing and the uncertainty calculation have been effected on the basis of the regulations applicable at the time of testing. As changes in legal provisions are possible, any potential user should ensure that this AMS is suitable for monitoring the measured values relevant to the application.

Any potential user should ensure, in consultation with the manufacturer, that this AMS is suitable for the intended use.

Basis of the certification

This certification is based on:

- Test report 936/21221789/B dated 19 March 2013 and addendum 936/21246946/B dated 7 September 2019 issued by TÜV Rheinland Energie und Umwelt GmbH and TÜV Rheinland Energy GmbH respectively
- Suitability announced by the German Federal Environment Agency (UBA) as the relevant body
- The ongoing surveillance of the product and the manufacturing process

Umwelt 🎧 **Bundesamt**

Publication in the German Federal Gazette: BAnz AT 23.07.2013 B4, chapter III No. 2.1, Announcement by UBA dated 3 July 2013:

Certificate:

AMS designation:

APDA-371 with PM_{2.5} pre-separator

Manufacturer:

HORIBA Europe GmbH, Oberursel

Field of application:

For continuous ambient air monitoring of suspended particulate matter, PM_{2.5} (stationary operation)

Measuring ranges during the performance test:

Component	Certification range	Unit	
PM _{2,5}	0 - 1,000	µg/m³	

Software version:

Version 3236-07 5.1.1

Restrictions:

None

Notes:

- 1. The measuring system complies with the requirements of the guide to "Demonstration of Equivalence of Ambient Air Monitoring Methods" (January 2010 version) for the component PM_{2.5}.
- 2. For monitoring PM_{2.5}, the instrument must be fitted with the following options: Sample heater (BX-830), PM₁₀ sampling head (BX-802), PM_{2.5} Sharp Cut Cyclone SCC (BX-807), combined temperature and pressure sensor (BX-596) or an ambient temperature sensor (BX-592).
- 3. During the performance test, the cycle time was 1 h, i.e. the filter was automatically changed once an hour. Every filter spot was sampled only once.
- Sampling time in the cycle time is 42min. 4.
- The measuring system must be operated inside a lockable measurement container. 5.
- The instrument must be calibrated on-site regularly using a gravimetric PM_{2.5} refer-6. ence method in accordance with EN 14907.
- 7. The measuring system may also be operated with the BX-125 pump (optional).
- 8. Since January 2012, the measuring system has been distributed with a reengineered rear plate which accommodates additional interfaces such as the optional BX-965 reporting processor.
- 9. The instrument was first publically announced by the Federal Environment Agency on 12 July 2010 (BAnz. p. 2597, chapter II number 1.1, note 7). Most recently, the Federal Environment Agency made an announcement regarding the instrument on 6 July 2012 (BAnz AT 20.07.2012 B11, chapter IV notification 2).
- 10. The test report on performance testing is available on the internet at www.gal1.de.

Test Report:

page 3 of 11

Publication in the German Federal Gazette: BAnz AT 26.08.2015 B4, Chap. V notification 43, Announcement by UBA dated 22 July 2015:

43 Notification as regards Federal Environment Agency (UBA) notices of 3 July 2013 (BAnz AT 23.07.2013 B4, chapter III number 2.1) and of 25 February 2015 (BAnz AT 02.04.2015 B5, chapter IV notification 10)

The APDA-371 air quality monitor with PM_{2,5} pre-separator manufactured by HORIBA Europe GmbH may also be operated with the BECKER VT 4.4 vacuum pump.

Statement issued by TÜV Rheinland Energie und Umwelt GmbH dated 23 March 2015

Publication in the German Federal Gazette: BAnz AT 31.07.2017 B12, Chap. II notification 32, Announcement by UBA dated 13 July 2017:

32 Notification as regards Federal Environment Agency (UBA) notices of 3 July 2013 (BAnz AT 23.07.2013 B4, chapter III number 2.1) and of 22 July 2015 (BAnz AT 26.08.2015 B4, chapter V notification 43)

The current software version of the APDA-371 air quality monitor with $PM_{2,5}$ pre-separator for suspended particulate matter, $PM_{2,5}$, manufactured by HORIBA Europe GmbH is: 3236-7 V 5.5.0.

Statement issued by TÜV Rheinland Energy GmbH dated 8 March 2017

Publication in the German Federal Gazette: BAnz AT 24.03.2020 B7, Chap. IV notification 50, Announcement by UBA dated 24 February 2020:

50 Notification as regards Federal Environment Agency (UBA) notices of 3 July 2013 (BAnz AT 23.07.2013 B4, chapter III number 2.1) and of 13 July 2017 (BAnz AT 31.07.2017 B12, chapter II notification 32)

The APDA-371 measuring system with $PM_{2,5}$ pre-separator for suspended particulate matter, $PM_{2,5}$ fraction, manufactured by HORIBA Europe GmbH satisfies the requirements defined in standard EN 16450. An addendum as integral part of test report No. 936/21221789/B is available online at www.qal1.de.

The current software version is: 3236-05 3.14.3

Statement issued by TÜV Rheinland Energy GmbH dated 6 December 2019

Publication in the German Federal Gazette: BAnz AT 28.07.2022 B4, Chap. III notification 42, Announcement by UBA dated 28 June 2022:

42 Notification as regards Federal Environment Agency (UBA) notices of 3 July 2013 (BAnz AT 23.07.2013 B4, chapter III number 2.1) and of 24 February 2020 (BAnz AT 24.03.2020 B7, chapter IV notification 50)
The current software version of the measuring device APDA-371 for suspended particulate matter PM_{2.5} of the company HORIBA Europe GmbH is: R9.3.0
In future, the measuring device will basically have a touch-sensitive screen and a USB port will now be installed in the front panel.
On the rear panel there is now an electrical connection for a new generation of digital weather sensors.
In this context, the previous temperature sensor (BX-592) will be replaced with the digital model BX-598 and the combined pressure and temperature sensor BX-596 will be replaced with the digital model BX-597A, which also measures humidity.
Statement issued by TÜV Rheinland Energy GmbH dated 28 April 2022

Publication in the German Federal Gazette: BAnz AT 20.03.2023 B6, Chap. IV notification 76, Announcement by UBA dated 21 February 2023:

76 Notification as regards Federal Environment Agency (UBA) notices of 3 July 2013 (BAnz AT 23.07.2013 B4, chapter III number 2.1) and of 28 June 2022 (BAnz AT 28.07.2022 B4, chapter III notification 42)

The current software versions of the APDA-371 measuring system for suspended particulate matter PM_{2,5} from the company HORIBA Europe GmbH are:

Version without touch-sensitive screen 3236-05 3.14.4.

Version with touch screen (old screen version) 3236-77 V5.2.0.

Version with touch-sensitive screen (new screen version; V3) R9.5.1

Statement issued by TÜV Rheinland Energy GmbH dated 16 September 2022

Certified product

This certificate applies to automated measurement systems conforming to the following description:

With the exception of a modified front design, the APDA-371 measuring system with $PM_{2,5}$ pre-separator exactly corresponds to the BAM-1020 developed and entirely manufactured by Met One Instruments, Inc.

The APDA-371 measuring system with $PM_{2,5}$ pre-separator consists of the PM_{10} -sampling inlet BX-802, $PM_{2,5}$ Sharp Cut Cyclone SCC BX-807, the sampling tube, the sample heater BX-830, the ambient temperature sensor BX-596 or, alternatively, the BX-592 ambient temperature sensor, the BX-127 (or optional BX-125) vacuum pump, the APDA-371 measuring instrument (incl. glass-fibre filter tape), the respective connecting tubes and lines as well as adapters and the roof flange.

The measuring system uses beta-attenuation as a measurement principle.

The particle sample passes the PM_{10} -sampling inlet and the $PM_{2,5}$ Sharp Cut Cyclone SCC at a flow rate of 1 m³/h and reaches the APDA-371 analyser via the sampling tube.

During performance testing, the measuring system was operated with the BX-830 sample heater.

Particles arrive at the measuring instrument and will be separated by the glass fibre filter tape.

A measurement cycle (incl. automatic checking of radiometric measurement) proceeds as follows (setting for PM_{2.5}: radiometric measuring time: 8min):

- 1. At the beginning of each cycle, initial and blank measurements are performed with a clean filter tape I0. This takes 8 min.
- 2. The filter tape is transported forward over a distance of 4 dust spots and pushed under the sampling point. The sample is taken from the filter spot where I0 was previously determined. For a sampling duration of 42 min. particulate-loaded air is then sucked through that filter spot.
- 3. At the same time, the spot 4 positions upstream on the filter band is submitted to radiometric measurement I1 for a duration of 8 minutes. This measurement is performed to check for potential drift effects caused by changes in external parameters such as temperature or relative moisture. The same spot is subjected to a third radiometric measurement I2 with an inserted reference foil. The same spot of the filter tape is subjected to yet another I1x, eight minutes before the end of the collection time in order to monitor stability of the zero point with the help of I1 and I1x.
- 4. Once sampling has been completed, the filter band is reversed back four sampling spots and the sampled filter spot is measured radiometrically (I3). The calculation of the concentration completes the measurement cycle.
- 5. The next cycle will start again with step 1.

The radiometric determination of mass is calibrated in the factory and is checked hourly during operation as part of internal quality assurance at the zero point (clean filter spot) and at the span point (built-in reference foil). Measured values at zero and span points are easily derived from the data generated. These can then be compared to stability criteria (drift) or target values for span (factory settings).

General notes

This certificate is based upon the equipment tested. The manufacturer is responsible for ensuring that on-going production complies with the requirements of the EN 15267. The manufacturer is required to maintain an approved quality management system controlling the manufacture of the certified product. Both the product and the quality management systems shall be subject to regular surveillance.

If a product of the current production does not conform to the certified product, TÜV Rheinland Energy & Environment GmbH must be notified at the address given on page 1.

A certification mark with an ID-Number that is specific to the certified product is presented on page 1 of this certificate. This certification mark may be applied to the product or used in advertising materials for the certified product.

This document as well as the certification mark remains property of TÜV Rheinland Energy & Environment GmbH. With revocation of the publication the certificate loses its validity. After the expiration of the certificate and on requests of the TÜV Rheinland Energy & Environment GmbH this document shall be returned and the certificate mark must not be employed anymore.

The relevant version of this certificate and its expiration is also accessible on the internet: **<u>gal1.de</u>**.
