(DAU) due to a component discontinuation.

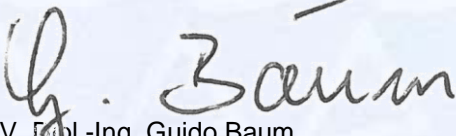

The function of the emission data evaluation system has been improved through
software updates and bug fixes:

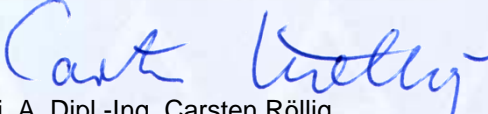

- Corrections to the limit value monitoring of moving monthly averages during data post-processing and introduction of the alternative O₂ reference value calculation for co-incineration waste plants in accordance with the amended 17th BImSchV.
- Correction of the EFÜ-FTP transfer of Hg when converting from Åµg to mg.

Plants that monitor Hg for official purposes and use data transmission via the remote monitoring system (EFÜ) must have a software version higher than 4.2.0.14 installed.
